### **New InterX Device Now Available for Pain Treatment**

Plano, Texas – A new medical device for the treatment of acute and chronic pain is now available in the US and Canada. This device provides healthcare professionals with a unique and effective tool to help them deliver effective, drug-free pain treatment to those who suffer daily from pain and injury. The new **InterX® 5002** is a portable, handheld neurostimulation device that is available to physicians, physical therapists, occupational therapists, chiropractors and other healthcare professionals for a wide range of acute and chronic pain conditions. The **InterX® 5002** delivers highly specific, targeted, dynamic electrical stimulation resulting in effective pain relief. This unique technology, previously available in Europe, has been developed and re-designed to provide InterX® FDA cleared medical products with defined treatment applications for healthcare professionals in the US.

InterX® technology incorporates unique features that are designed to optimize the effectiveness of pain relief, including:

**"Interactive" stimulation** - The electrical properties of the skin and the underlying tissue change in response to injury, pain or trauma. **InterX®** technology responds dynamically to these changes during treatment, so no two consecutive signals are the same. This helps prevent the development of resistance to the stimulation.

**Identification of optimal treatment points** - InterX® technology uses its ability to identify changes in tissue properties to provide feedback to the therapist that is valuable in the identification of optimal treatment locations.

## Page 2 – InterX

The concentric electrodes of the InterX 5002 are moved across the skin, without the need for gel of any kind, scanning for areas of low impedance. Feedback is provided in a number of ways, such as changes in the way the device moves across the skin, or through readings displayed on the screen that relate to the condition of the tissue immediately under the electrodes.

**Specific and targeted treatment** - Once optimal treatment locations are identified, very targeted, high density stimulation is provided to specific nerve endings that are affected by trauma, pain or injury. The ability to be able to deliver treatment to tissues that have been neurologically disrupted by injury, in such a specific manner greatly enhances the effectiveness of stimulation.

This specificity, when combined with the constantly adjusting signal and applied to optimal treatment areas, is what makes InterX technology so useful in providing highly effective pain relief.

### **InterX® Clients Around the World**

The list of clients whose patients and/or teams have been changed by InterX® products is truly impressive and includes:

- Over 50% of the NFL teams in the US, (including the Dallas Cowboys)
- Over 40% of the NBA teams in the US
- MLB, NHL and MLS teams, including LA Galaxy
- Dr Nicholas DiNubile, Orthopedic Consultant to the Philadelphia 76ers and the Pennsylvania Ballet & author of 'Framework'
- Dr Jeff Spencer, DC "Chiropractor to the Discovery Channel Pro Cycling Team Winners of the 2005 Tour De France"
- Dr James Dillard, MD, DC, author of 'The Pain Solution'

InterX® products are also available internationally across a range of different countries.
